

SYSTEM FLOWCHART

COMP 52 Module 12

Write the JCL required for the job described on the flowchart and on the next slides.

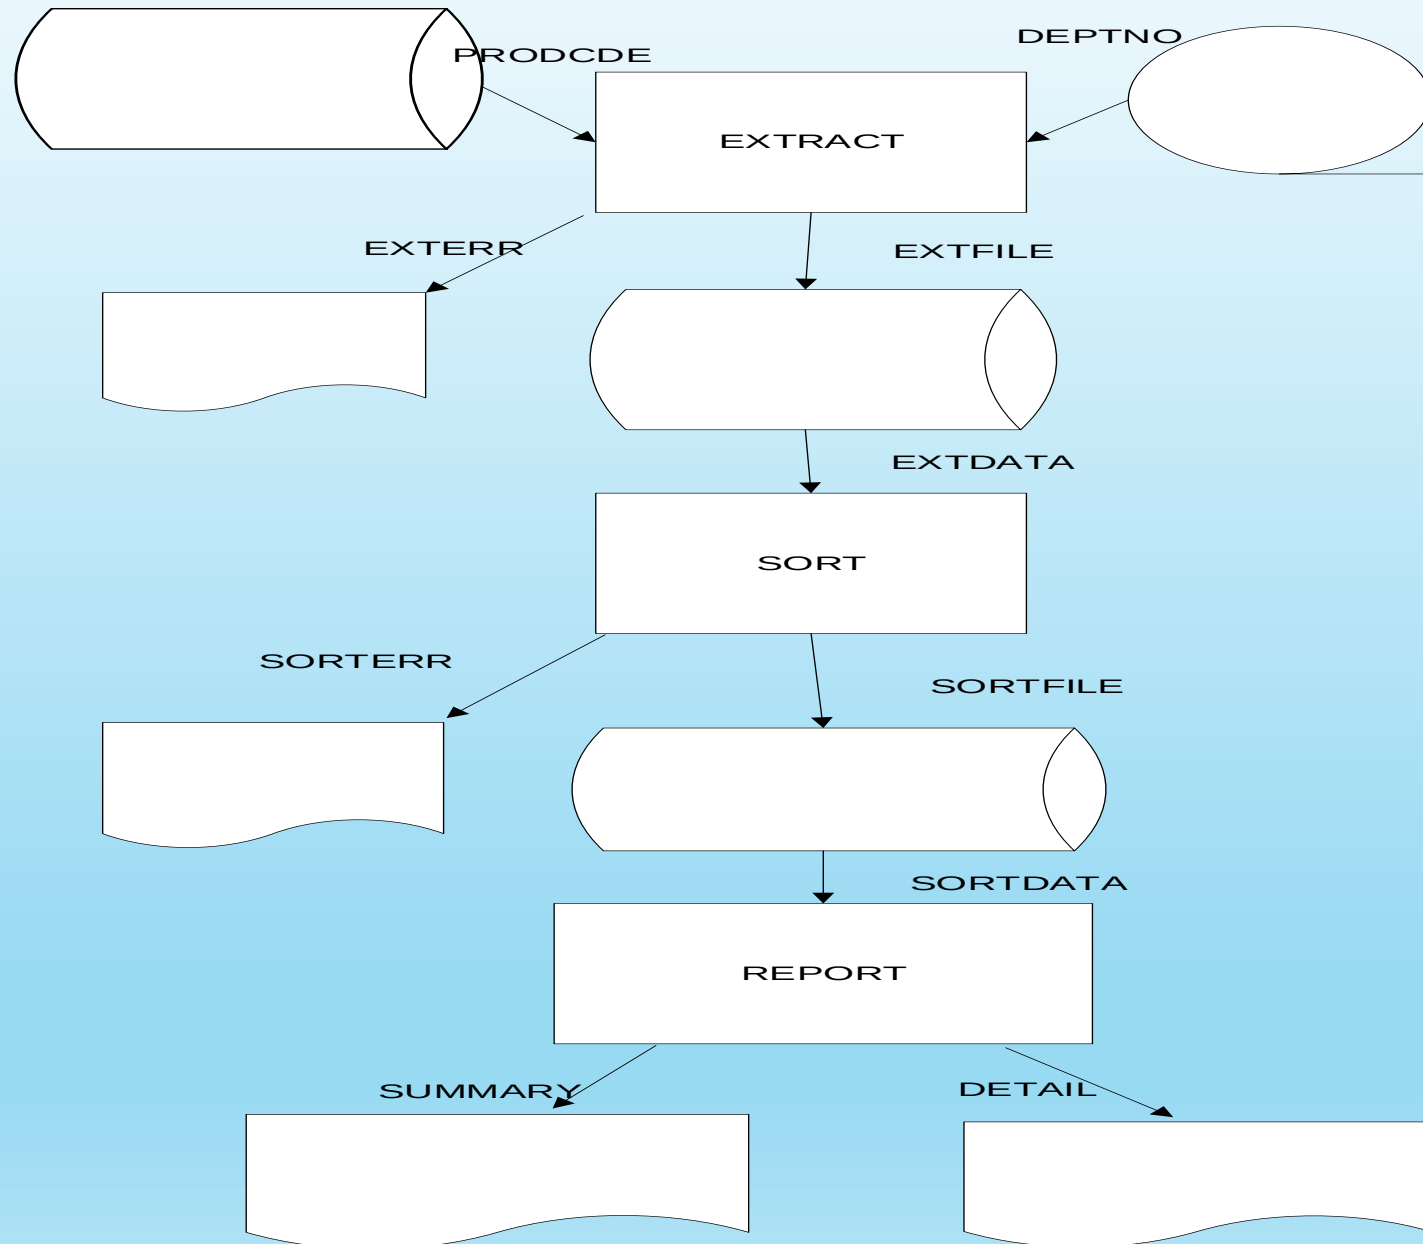

Execute the SORT program only if the EXTRACT program issues a return code of zero or 4 only.

Execute the REPORT program only if the SORT program issues a return code of 4 only.
Allow 3 minutes execution time for the first jobstep and 2.5 minutes for the last jobstep.

The job is to be run in class S. Use our JCL standards to complete the JOB statement.
The job is to be held until released by the operator.

The 2nd and 3rd programs are found on PRODLIB.

Code an OUTPUT statement that applies to all SYSOUTs automatically. Have the output routed to class J, double spaced.

File:	PRODCDE	File:	DEPTNO
Dataset Name:	PRODCODE	Dataset Name:	DEPTNUM
I/O Device:	DASD	I/O Device:	Cartridge
Volume:	CDEPAK	Volume:	183563
Record Length:	75 bytes	Record Length:	60 bytes
Blocking Factor:	4/1	Blocking Factor:	8/1
File Size:	2000-6000 records	File Size:	6000-9000 records
Status:	Catalogued	Status:	Exists, not catalogued
Disposition:	Retain, uncatologue	Disposition:	Retain, catalogue
Abnormal Disposition:	Retain	Abnormal Disposition:	retain
Special Notes:	Ensure not deleted for 30 days	Special Notes:	3 rd file on cartridge with SUL labels

File:	EXTFILE & EXTDATA	File:	SORTFILE & SORT DATA

Special Notes:	Print 2 copies	Special Notes:	Don't allow more than 50 lines

File:	DETAIL	File:	SORTERR
Dataset Name:	n/a	DatasetName:	n/a
I/O Device:	Printer	I/O Device:	Printer
Special Notes:	Print to class J	Special Notes:	None

Write the JCL required for the job:

The job is to be run in **class S**. Use our **JCL standards** to complete the JOB statement.
The **job is to be held** until released by the operator.

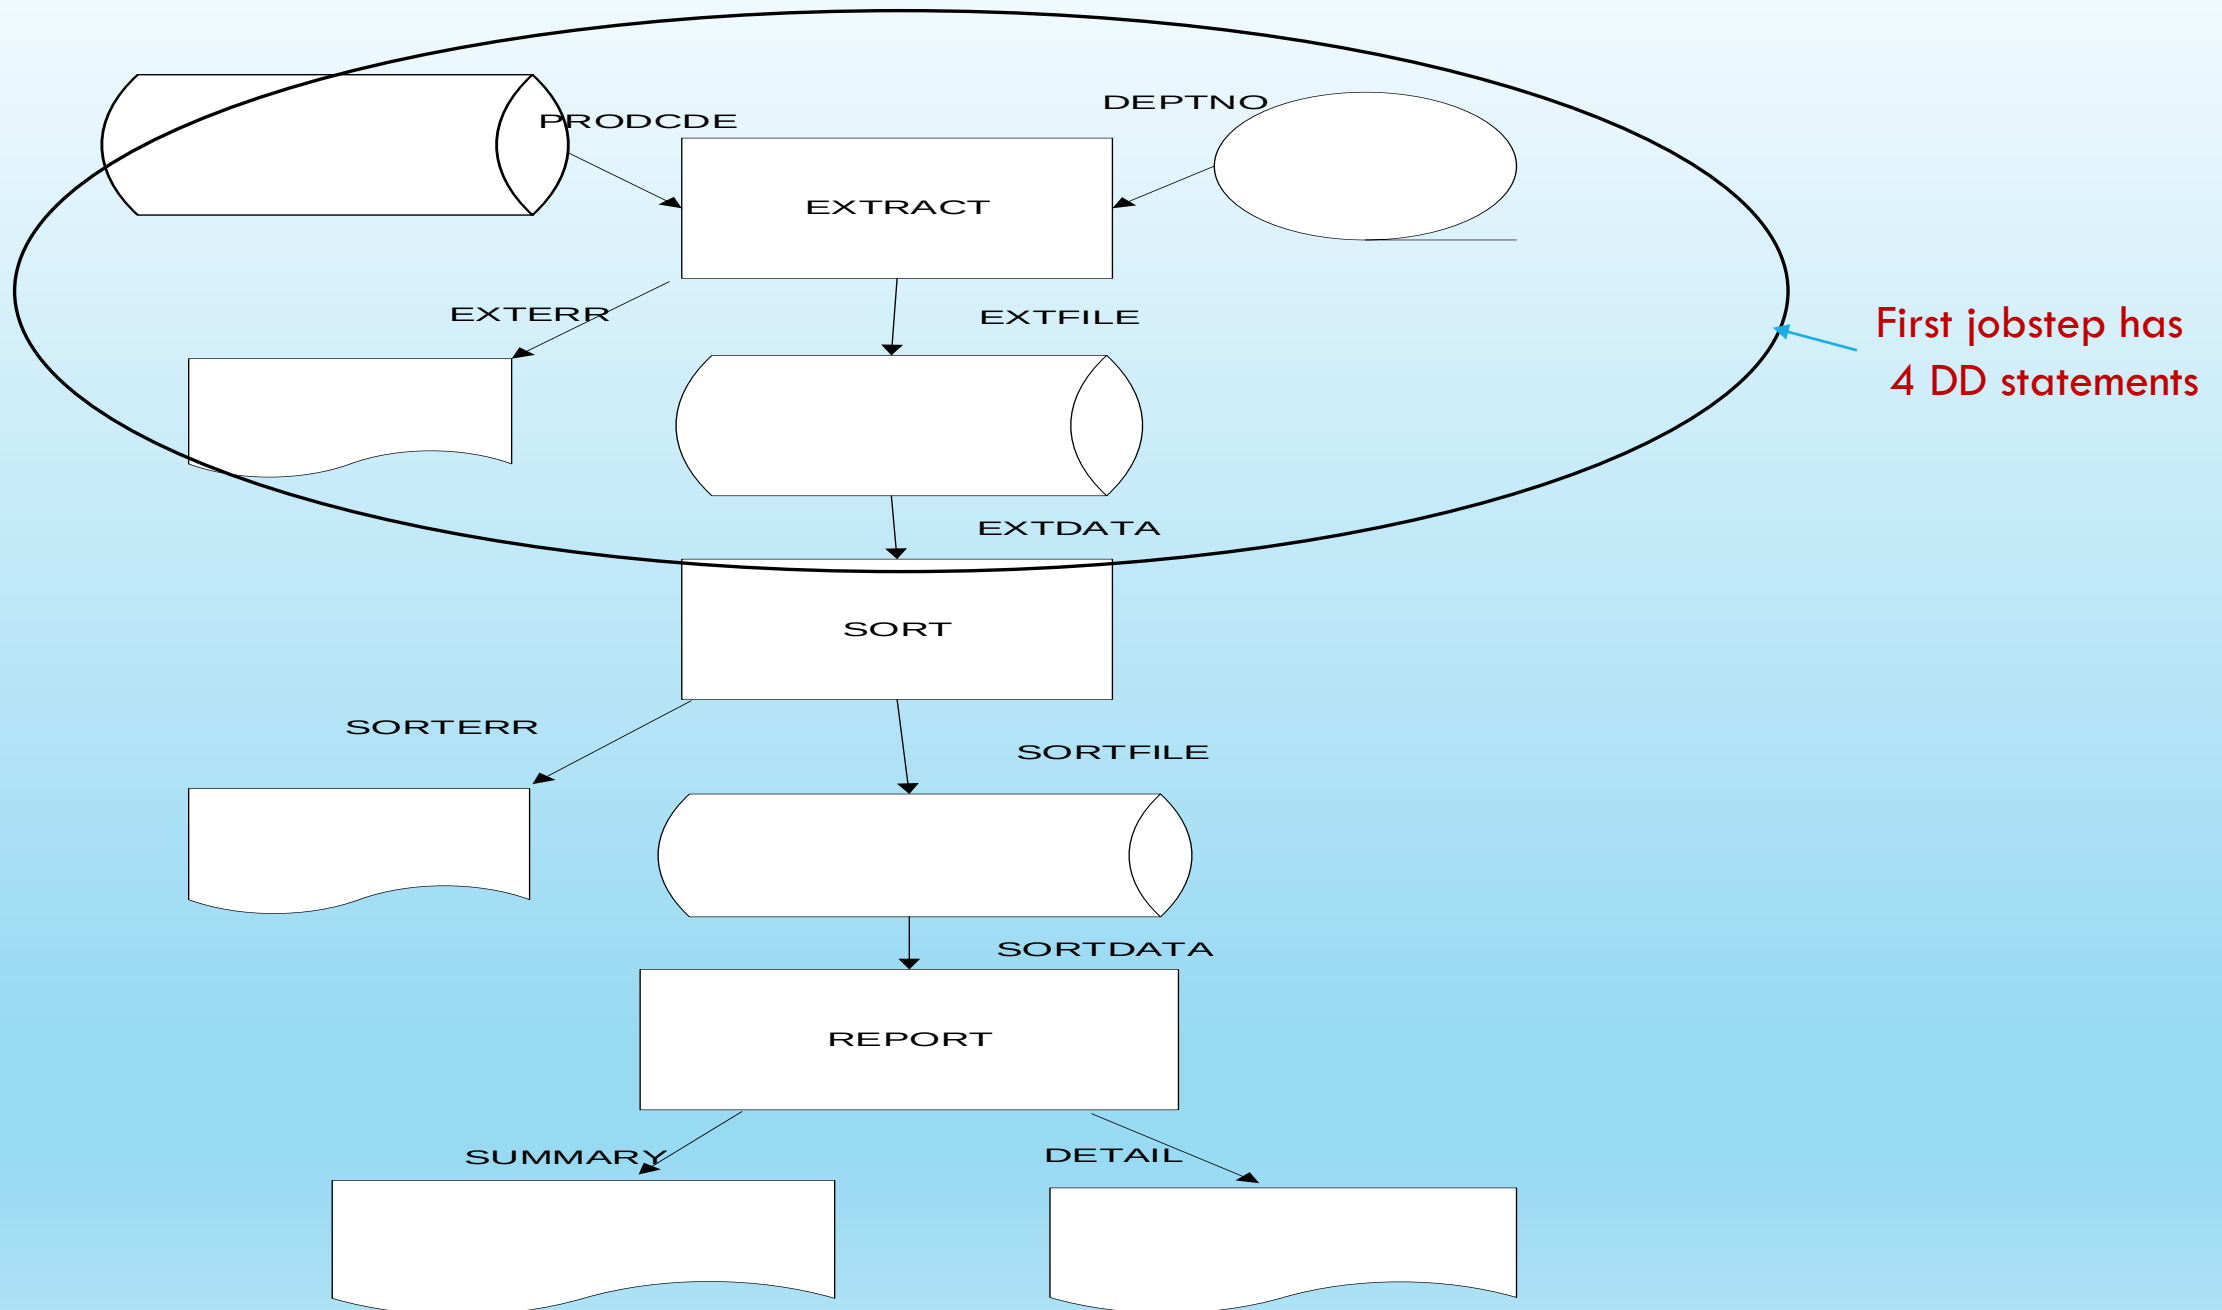

```
//KC02131A JOB 'DONNA GRAVES',  
//          MSGCLASS=H,  
//          MSGLEVEL=(1,1),  
//          CLASS=S,  
//          TYPRUN=HOLD,  
//          NOTIFY=&SYSUID
```

The 2nd and 3rd programs are found on **PRODLIB**:

```
//JOBLIB DD DSN=PRODLIB,  
//          DISP=SHR
```

Code an OUTPUT statement that applies to all SYSOUTs **automatically**.
Have the output routed **to class J, double spaced**.

```
//OUT OUTPUT DEFAULT=YES,  
//          CONTROL=DOUBLE,  
//          CLASS=J
```

Allow 3 minutes execution time for the first jobstep.

```
//STEP1 EXEC PGM=EXTRACT,  
//          TIME=3
```

Write PRODCODE and DEPTNO DD statements:

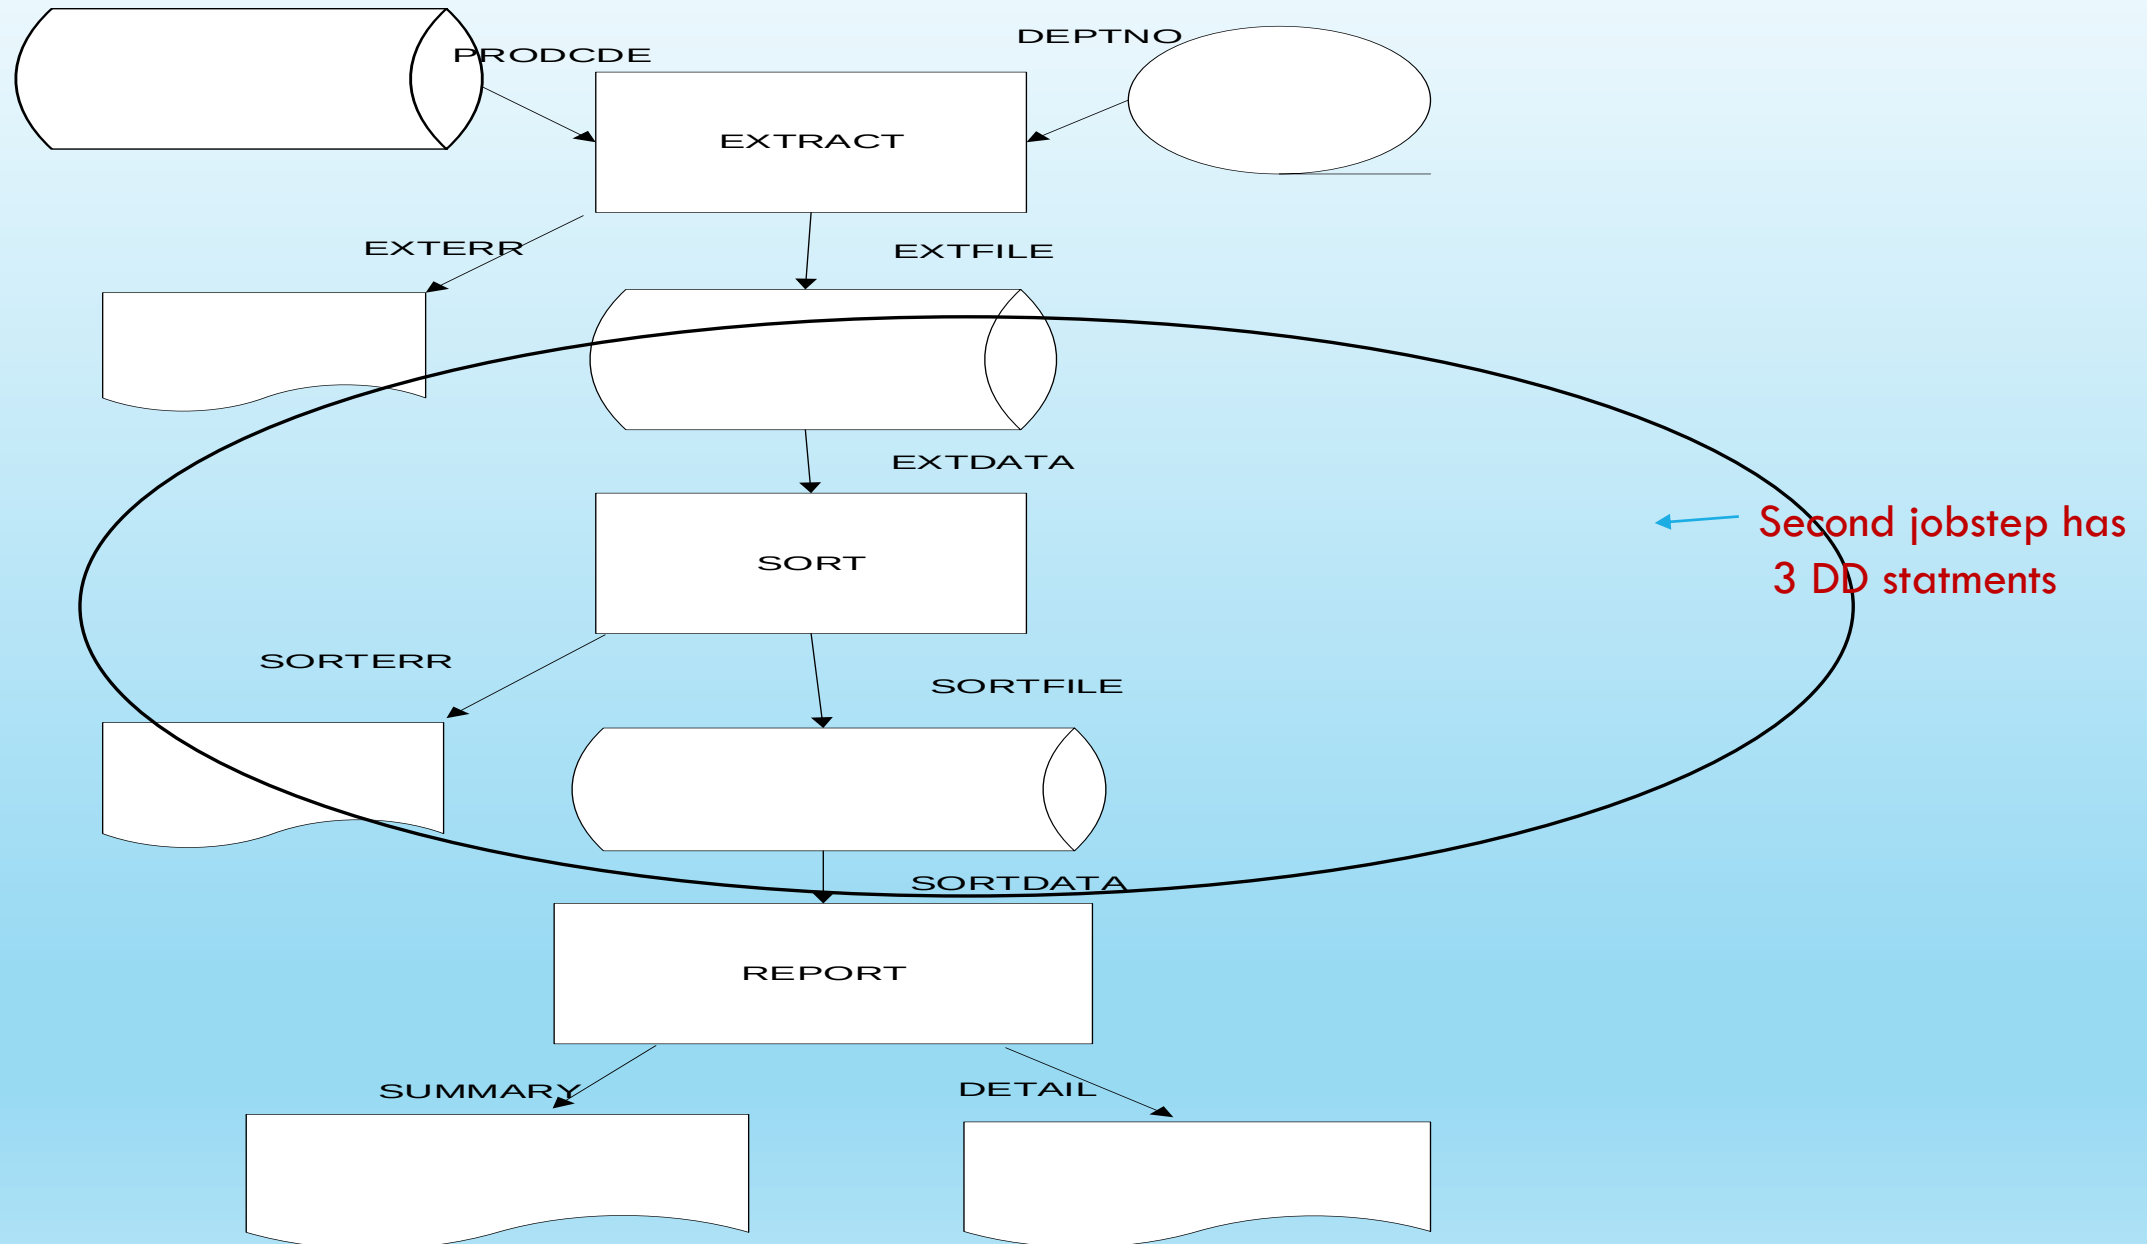

```
//PRODCDE DD DSN=PRODCODE,  
//          DISP=(SHR,UNCATLG,KEEP),  
//          RETPD=30
```

```
//DEPTNO DD DSN=DEPTNUM,  
//          DISP=(SHR,CATLG,KEEP),  
//          UNIT=TAPE,  
//          VOL=SER=183563,  
//          LABEL=(3,SUL)
```

Write the first step's EXTERR and EXTFILE DD statements:

```
//EXTFILE DD DSN=&&TEMP,  
//          DISP=(NEW,PASS),  
//          UNIT=VIO,  
//          DCB=(LRECL=75,BLKSIZE=300,RECFM=FB),  
//          SPACE=(300,(750,25),RLSE)
```

```
//EXTERR DD SYSOUT=H,  
//          OUTLIM=50
```

Execute the SORT program only if the EXTRACT program issues a return code of zero or 4 only.

```
//STEP2 EXEC PGM=SORT,  
//      COND=((0,NE),(4,NE))
```

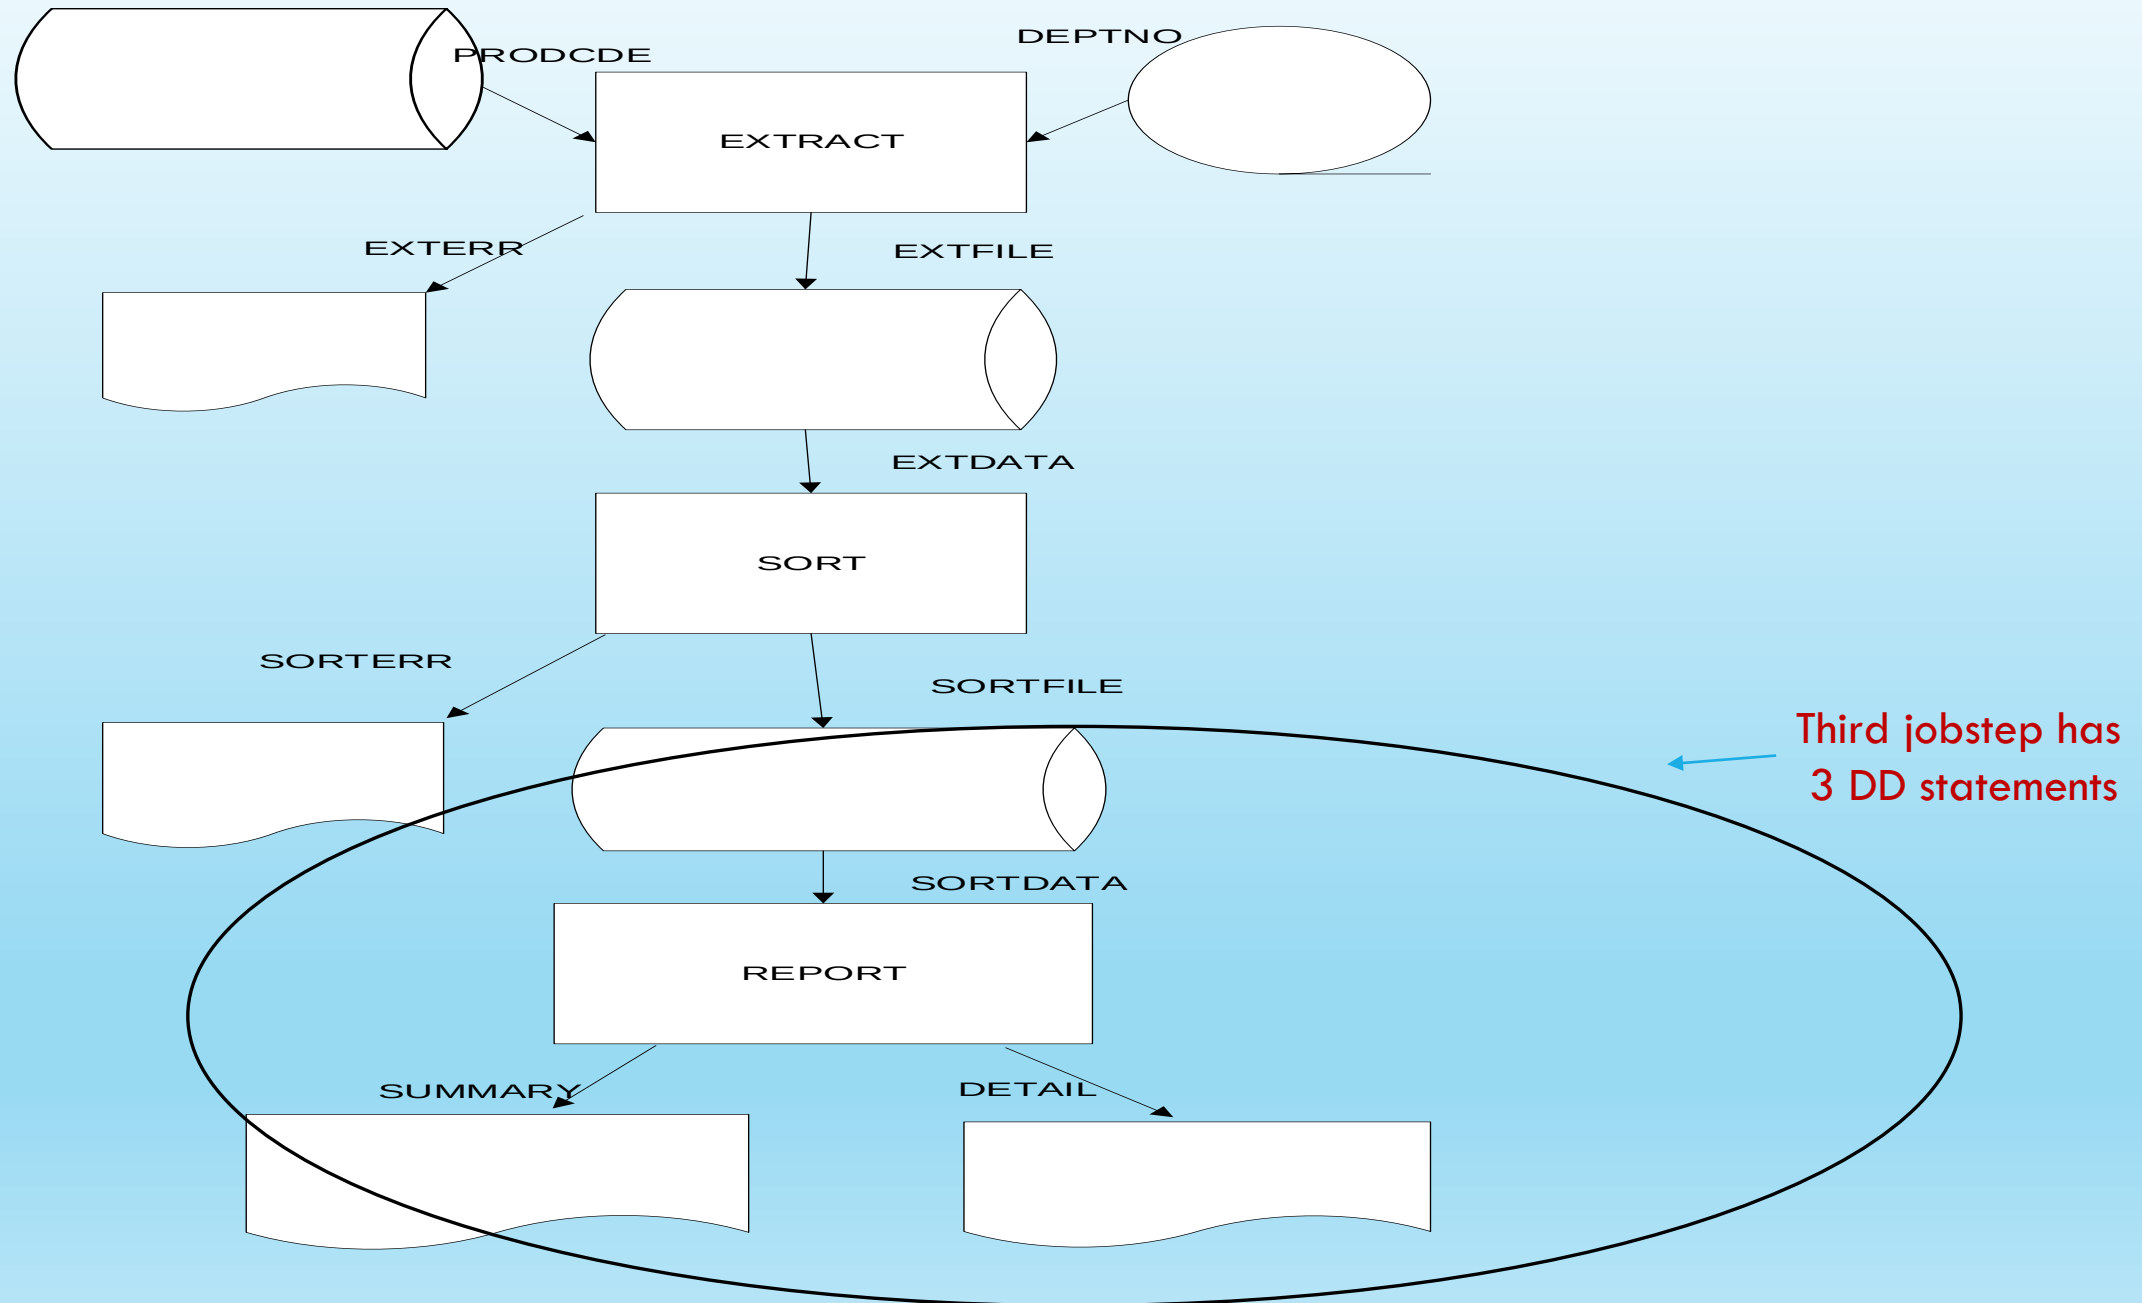

Write the SORTFILE and SORTERR DD statement:

```
//SORTFILE DD DSN=&&SORT,  
//          DISP=(NEW,PASS),  
//          UNIT=VIO,  
//          DCB=*.STEP1.EXTFILE,  
//          SPACE=(300,(750,25))
```

```
//SORTERR DD SYSOUT=H
```

Write the second step's EXTDATA DD statement:

```
//EXTDATA DD DSN=*.STEP1.EXTFILE,  
//          DISP=(OLD,DELETE)
```

Execute the REPORT program only if the SORT program issues a return code of 4 only.
Allow 2.5 minutes for the last jobstep.

```
//STEP3 EXEC PGM=REPORT,  
//      COND=(4,NE,STEP2),  
//      TIME=(2,30)
```

Write the second step's DD statements:

```
//SORTDATA DD DSN=*.STEP2.SORTFILE,  
//          DISP=(OLD,DELETE)
```

```
//DETAIL DD SYSOUT=J
```

```
//SUMMARY DD SYSOUT=H,  
//          COPIES=2
```

```
//
```
